🪪 PROFILE

As Product Architect with strong team leadership skills, I focus on guiding development from requirements definition through system architecture to final implementation.

My experience spans the full-stack, but my true strength lies in shaping scalable, maintainable solutions and facilitate technical excellence across teams. My technical skills set complements a versatile personality, and I embrace leading by example in an environment where collaboration and innovation are a constant presence.

When surrounded by open-minded colleagues, I find myself communicate with clarity and bring contagious enthusiasm to every challenge.

🎓 EDUCATION

MSc Computer Science
Aalborg University ⧉
2017 – 2019 | Aalborg

Master Thesis: Colaboration with Volkswagen Group, Germany

Ba Software Development
University College of Northern Denmark ⧉
2015 – 2019 | Aalborg

Final Project: Colaboration with Treat Systems A/S, Denmark

💼 PROFESSIONAL EXPERIENCE

Product Architect
Novo Nordisk ⧉
• *03/2023 - Present | Copenhangen*

I started as a UI5 developer for implementing a GxP digital solution for handling certificates.

Quickly advanced to a senior role, leading UI5 and CAP applications and with a constant self-improvement mindset I managed to grasp Novo Nordisk's complex systems such as LIMS and VaultRIM with ease.

I was developing end-to-end applications on SAP BTP, while also designing, articulating, and implementing architectural patterns across complex on-prem system integrations.

I was later appointed Product Architect with responsibilies around people, process, and technology ensuring quality across the product lifecycle.

Full-stack software developer
Perfion A/S ⧉
• *09/2019 - 02/2023 | Aalborg*

Full-stack developer with experience in SQL database, C#/.NET, and Angular—using TypeScript and HTML/CSS to build responsive, user-friendly interfaces.

Software developer
Treat Systems A/S ⧉
• *06/2019 - 03/2019 | Aalborg*

I was a member of a Scrum team that implemented from the ground up a comprehensive software solution for antimicrobial stewardship.

The focus was on antimicrobial data collection and manipulation, within an environment where requirements precision and error toleration were extremely strict.

📁 PROJECTS

Train Ticket System - Clean Architecture Pattern ⧉
• *C#, .NET, Web API, Angular, Elasticsearch, SQL*

This project follows the Clean Architecture Pattern, which has its foundation deep in SOLID Principles. It is a simple concept with numerous benefits, particulary for large scale applications.

Chat Web App ⧉
• *C#, .NET, SignalR, SQL*

This project arouse from of my curiosity about how a chat application works. Implemented during my studies free-time, it was really enjoyable time spent because I learned a lot about how to use SignalR.

Stackoverflow search
• *C#, .NET, Web API, Angular, Elasticsearch, SQL*

Elasticsearch is a great approach to quickly retrieve data using flexible queries. This project addresses a full search using autocomplete on the Stackoverflow database. It proved fast and efficient, with several tweaking options to optimise the query.

Send messages using Rabbit MQ ↗
- *Javascript, C#, .NET, RabbitMQ, SQL*

Rabbit MQ is the among most widely deployed open source message broker. It wouldn't be long before I got my hands on another free-time project, this time to investigate how messages are sent, queued then received.

Personal Website ↗
- *Angular, JSON, HTML, CSS*

A good practice exercising my passion for coding, and let the world know about it, was to make a copy of my Curriculum Vitae and deloy it live.

🧠 SKILLS

Skill	Level
SAP BTP	██████████
SAP UI5/CAP	██████████
OData	████████░░
On-Prem Systems/Cloud Foundry	████████░░
C#/.NET	██████████
TypeScript/JavaScript	██████████
